Motivated Chicken Science graduate from Wild Chicken University with expertise in advanced cluckology, poultry analytics, and data-driven egg production. Experienced in solving high-impact barnyard problems, optimizing chicken-crossing strategies, and translating complicated “bok bok” requirements into measurable business outcomes. Passionate about building a future where every chicken can cross the road safely, efficiently, and with statistically significant confidence.

EXPERIENCE

Senior Chicken Operations Specialist <i>Kentucky Fake Chicken Corporation</i>	Jan 2023 — Present <i>Cluckington, Coop Country</i>
- Managed daily operations for a high-performance flock of 500+ chickens while maintaining a strict zero-fox security policy. - Developed an automated feeding optimization system that allegedly increased chicken happiness by 47%, according to a completely imaginary internal survey. - Reduced average road-crossing time from 14 minutes to 3 minutes by introducing Agile Chicken Crossing methodology. - Mentored 12 junior chickens in leadership, communication, seed prioritization, and professional clucking.	
Junior Poultry Data Analyst <i>Clucklytics Inc.</i>	Jan 2019 — Dec 2022 <i>Eggmonton, Coop Country</i>
- Analyzed millions of fictional “bok bok” records to identify previously unknown patterns in chicken communication. - Built dashboards tracking egg production, feed consumption, nap frequency, and suspicious rooster activity. - Automated weekly poultry reports with Python, saving the team approximately 20 hours of unnecessary spreadsheet clucking per month. - Presented analytical findings to senior management despite management consisting primarily of three chickens in a trench coat.	

PROJECTS

Why Did the Chicken Cross the Road? Python, PyTorch, ChickenVision <i>Wild Chicken University</i>	Mar 2026 — Sep 2026 <i>Coop City, Coop Country</i>
- Developed a machine-learning model to predict whether a chicken would cross the road based on traffic, weather, seed availability, and existential motivation. - Trained the model using 10,000 completely fictional chicken crossings and achieved 99.7% accuracy on an equally fictional test set. - Built a computer-vision pipeline capable of distinguishing chickens from ducks with almost embarrassing confidence. - Concluded that the chicken crossed the road primarily to improve model generalization.	

SKILLS

Programming	Python, SQL, C, Bok++
Chicken Learning	Machine Learning, Deep Learning, Statistical Modeling, Egg Forecasting, Poultry Recognition
Data Engineering	Apache Airflow, Databricks, Spark, MLflow, Git, Chicken Pipelines
Poultry Technologies	ChickenVision, CoopDB, Eggcel, Power BI, Feed Optimization
Professional Skills	Teamwork, Communication, Leadership, Problem Solving, Advanced Clucking

EDUCATION

Master of Chicken, Advanced Poultry Analytics — Wild Chicken University	2024 — 2026 Coop City, Coop Country
Bachelor of Chicken, Applied Cluckology — Wild Chicken University	2020 — 2024 Coop City, Coop Country
